

The Kananaskis

Constructed for today's rapidly inflating housing market, Cedar Ridge's "Kananaskis" model is designed to balance both affordability and efficiency. Intended for new families or first time home buyers, this 1536 square foot home wastes no space, with ample living areas and three bedrooms. The cost-effective two storey design features the latest in energy efficient options, including a variable speed two stage furnace, a high efficient water heater, energy star rated windows, a digital programmable thermostat, R50 attic insulation, and much more... Built to the "Gold Level", the highest standard in the BuiltGreen program, this home is designed for water conservation, high indoor air quality, and energy efficiency.

Located in the new Builtgreen community of SunRidge, the home also has access to a play park, a sleigh hill, and a network of jogging and walking paths leading around ponds, bridges, and streams.

For the convenience of all our new clients, the finishing aspects in the construction of this home are an example of Cedar Ridge's standard specifications. Standard allowances have been used for painting, cabinetry, flooring, finishing, lighting, and tile. Additional finishing upgrades have not been made to this house, and these standards are the minimum on every new Cedar Ridge home.
